

Compliance & Validation Services Presents a 3-Hour Online Training Course on: Qualification of Warehouses & Large Cold Stores

27 August 2020

3-Hour Online Training Course

Start time: 08:30 London/Dublin
09:30 Berlin/Amsterdam

Finish time: 11:30 London/Dublin
12:30 Berlin/Amsterdam

Course Description and Who Should Attend

Ensuring that the correct storage conditions are maintained for drug products and raw materials is essential in assuring that product/materials are not damaged (reduced efficacy and/or increased degradant levels) and shelf-life information is still applicable. Get it wrong, and it could have serious consequences for the patient. This course is aimed at ensuring attendees are equipped with knowledge that will help them meet industry standards and regulatory expectations in the area of qualification, including effective temperature mapping of warehouses and large cold stores. Ultimately, this will demonstrate the ability of the facilities to store all material within the desired conditions. The course includes: getting the requirements correct (URS for new/modified facilities); Installation Qualification (IQ), Operational Qualification (OQ) and Performance Qualification (PQ), including key stages for mapping, for example critical monitoring locations (including example monitoring location maps); instrumentation and reporting; and operational considerations (including the use of Mean Kinetic Temperature [MKT] for assessing the impact of deviations). The course is aimed at individuals involved directly or indirectly in qualifying these facilities. Target disciplines include validation, quality assurance, technical support, storage facility operation staff (supervisors and management), and engineering.

Course Presenter

Mike James, Training Director, Compliance & Validation Services Limited.: Mike has over 25 years experience in the pharmaceutical industry, working in a variety of compliance and validation roles. His experience includes preparation and delivery of national/client-based validation training courses, hands-on validation work, validation project management and regulatory compliance consultancy. Previously, Mike spent four years as the Site Validation Manager for GlaxoSmithKline (GSK) at Speke, where he was responsible for all site validation activities, including the development and maintenance of the Site Validation Programme. Temperature mapping is one of Mike's key areas of expertise / experience. Before moving to the pharmaceutical industry he spent 15 years as an industry chemist.

Online Training Platform

We use the industry leading GotoWebinar®, LogMeln, Inc. platform for our online training courses. It's intuitive and simple to use, however we do recommend that you check your system's compatibility using the '**CHECK SYSTEM COMPATIBILITY**' link provided below (we use 'standard webinar'). To find out more about how our online training process works, from booking through to the end of the course, please click on the '**HOW IT WORKS**' link provided below:
